

pt.ID | An affordable, turn-key solution that ensures Positive Patient ID

Ensuring patient safety starts at the point of admission

Pt.ID is a “plug and play” wristband solution from Taylor Healthcare. Everything you need to print secure, state-of-the-art patient wristbands – the printer, the bands, ink, network connectivity and support – is included in one low monthly price.

Preventable medical errors are one of the leading causes of death in the United States, and healthcare professionals unanimously agree Positive Patient Identification is a critical component to reducing this risk!

Here’s a quick survey you can ask yourself

- How often do we “re-band” because our bands just don’t last?
- What’s the read rate of the barcode scans on our wristbands?
- How would patients rate the comfort of our wristbands?
- How “user friendly” are our wristbands to the healthcare professionals that need to read them?
- Do our wristbands provide easy-to-spot visual cues that easily identify patient risks such as Allergies, MRSA, and Fall Risks?
- Do we have the most cost-effective wristband solution for our facility’s unique services?

If any of these questions leave you feeling like there’s room for improvement, chances are very good that Taylor Healthcare can help.

Taylor Healthcare offers low-cost, leading edge color printing technologies that eliminate manual processes, improve patient safety and enhance the patient experience.

EPSON 3400LT

Seamless integration with your HIT systems to leverage your existing investments

Automated highlighting of critical information in the required color.
