

Give Patients a Better Night's Sleep and Improve HCAHPS Scores

Are your HCAHPS scores suffering due to a patient's inability to sleep in a noisy hospital environment?

According to the Center for Medicine and Medicaid Services, "Quietness of Hospital Environment" consistently receives the lowest HCAHPS scores - 20 percent lower than the overall average. Patient Sleep Kits from Taylor Healthcare can help.

Anyone who's had a hospital stay knows that beeping monitors, pagers, phones, hallway chatter, roommates, and even squeaky laundry carts can make for a not-so-restful place to heal.

Our Sleep Kits provide vital sleep aids to help patients relax during what can be a stressful hospital stay, leading to a better night's rest.

Benefits:

- Improved HCAHPS scores
- Increased CMS reimbursements
- Improved quality of care
- Enhanced patient satisfaction
- Patient centered care with personalized kits
- Improved brand awareness
