

Mobile Signature Capture

Patient Engagement

Sign Digitally By Mobile Device

Taylor Healthcare rethinks the traditional patient registration process by Mobile Signature Capture – an enhancement to our Check-In and Informed Consent solutions.

Powered by the innovative and patented KLIC-Sign™ Technology, Mobile Signature Capture allows patients to digitally sign and complete required documents on their own smart devices at the point of care.

Patient forms, documents and materials are made accessible via their own device in a HIPAA-compliant process based on the patient's geographic location. No apps, passwords, or access codes required.

Reimagine how healthcare providers and patients engage with Mobile Signature Capture by Taylor Healthcare.

Mobile Signature Capture Benefits

- Enhances patient communication
- Increases staff efficiency
- Ensures compliance
- Increases patient satisfaction
- Lowers risk of cross-contamination of hardware
- Lowers costs
