

Forms on Demand

Document Automation

Eliminate Preprinted Documents

Despite successfully implemented EHRs, many healthcare organizations continue to rely on outdated and inconsistent preprinted patient forms. Paper-based forms processes are oftentimes linked to risk, waste and inefficiencies.

Forms on Demand solves the paper problem by eliminating preprinted forms and allowing you to print documents, wristbands and labels on demand as needed.

With access to a complete library of electronic forms, required patient documentation can be printed with the correct patient demographic information from anywhere within the organization. With Forms on Demand by Taylor Healthcare, you can streamline care while saving costs of preprinted forms.

When we were in a paper world, we had stacks of loose documents that often didn't get filed in a timely manner. If someone needed to locate one, the staff would have to sift through stacks of paper. Today, there are no loose documents. Each and every document is printed on demand with the barcoded information. The staff can just pull them off the printer and put them in the chart. The nurses love it.

- HIS Director, Southeastern Regional Medical Center

Forms on Demand Benefits

- Eliminate preprinted forms
- Increase staff efficiency
- Enhance patient safety
- Reduce risks
- Ensure business continuity
